

Coffee Shop Sales Dashboard - Project Explanation

Overview

This dashboard was created in Microsoft Excel using Pivot Tables, Pivot Charts, Slicers, and formatting to analyze coffee shop sales.

What you have done

- Imported and organized the sales dataset.
- Created Pivot Tables to summarize sales.
- Built Pivot Charts for weekdays and store comparison.
- Added slicers/filters for interactive analysis.
- Designed a dashboard with KPIs and charts.

Dashboard Components

1. Total Revenue: Sum of Sales.
2. Average Sale: Average transaction value.
3. Highest Sale: Maximum transaction.
4. Total Orders: Count of orders.
5. Best Selling Product: Product with highest sales.
6. Sales by Region/Store: Compare locations.
7. Orders on Weekdays: Bar chart showing demand by day.

Interview Questions & Answers

Q1. What is a Pivot Table?

A. A tool that summarizes large datasets.

Q2. Why use Pivot Charts?

A. To visualize Pivot Table summaries interactively.

Q3. What is a Slicer?

A. A visual filter for Pivot Tables/Charts.

Q4. Why create a dashboard?

A. To present KPIs and insights in one place.

Q5. What insight can weekday chart provide?

A. Identify busiest and slowest days.

Q6. Why compare store locations?

A. To evaluate branch performance.

Q7. Difference between Revenue and Orders?

A. Revenue is money earned; Orders is transaction count.

Q8. What Excel skills were used?

A. Pivot Tables, Pivot Charts, Slicers, Formatting, Charts, Basic formulas.

Conclusion

This project demonstrates practical Excel data analysis and dashboard development skills suitable for a beginner Data Analyst portfolio.
